

# SECURITY MONITORING SERVICES

## CASE STUDY

**INDUSTRY** Manufacturing

**EMPLOYEES** 10,000+

**COUNTRY** USA

## COMPANY PROFILE

The client is a global manufacturer of leading technologies in circuit protection, power control, and sensing. With over 20,000 employees and above \$15 billion annual revenue.

## CHALLENGE

The client was interested to monitor and identify the technical risk across their multiple locations and improve their current security state

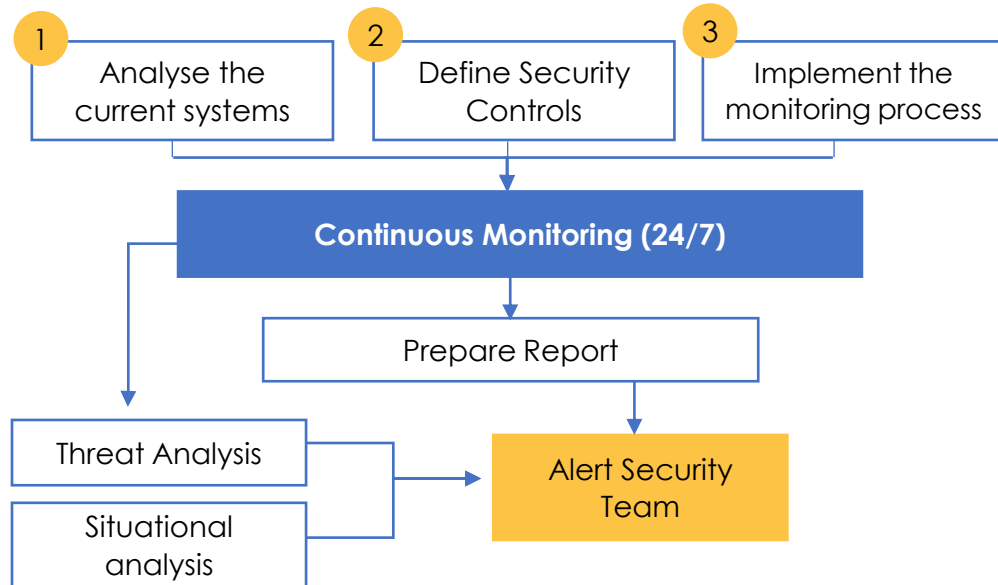

**STRATEGY**

Create a strategic roadmap to monitor, identify, and mitigate the current risk factor to protect their data globally.

**SOLUTION**

- Workshops on various departments across their global location and Grasp a detailed discussion on the current technical landscape with the help of their IT Application Team, NOC, SOC, & DOC.
- 24/7 Proactive monitoring of their Network, Email Servers, SharePoint Online, and OneDrive for Business.
- Security assessment on the critical equipment, Wi-Fi network, web application, critical APIs, and critical applications to identify cyber risk.
- Assimilate the information gathered through a security assessment
- Create a strategic roadmap with prioritized solutions to mitigate the identified threats and provide a future state direction for the organization.

## RESULTS

- A strategic roadmap is layered with prioritized security protection to enhance the future state of the organization.
- AMBC Continuous Monitoring Service provided real-time views to help IT professionals respond proactively and quickly to threats and compromises
